

RKDF University

Program Outcomes, Program Specific Outcomes and Course Outcomes

Faculty of Architecture

B. Arch

Program Outcomes

PO1: Understand the real-life situation in architectural practice and recognize the dialectic relationship between people and the built environment (especially with reference to the Indian sub-continent) with reference to their needs, values, behavioural norms, and social patterns.

PO2: Work collaboratively toward synthetic design resolution which integrates an understanding of the requirements, contextual and environmental connections, technological systems and historical meaning with responsible approach to environmental, historical and cultural conservation.

PO3: Apply visual and verbal communication skills at various stages of the design and delivery process.

PO4: Thrive in a rigorous intellectual climate which promotes inquiry through design research.

PO5: Produce professional quality graphic presentations and technical drawings/documents.

PO6: Critically analyse building designs and conduct post-occupancy evaluations.

PO7: Work in a manner that is consistent with the accepted professional standards and ethical responsibilities.

PO8: Work in collaboration with and as an integral member of multi-disciplinary/interdisciplinary design and execution teams in the building industry.

PO9: Conduct independent and directed research to gather information related to the problems in architecture and allied fields.

PO10: Students able to work effectively in a multi-disciplinary/inter-disciplinary team in the building industry, by providing 360° knowledge of architecture.

Program Specific Outcomes (PSOs)

PSO1: Demonstrate critical thinking through a self-reflective process of conceptualization and design thinking that is open to consideration of alternative perspectives by analyzing, evaluating, and synthesizing ideas and information gathered through applied research grounded in information literacy.

PSO2: Implement complex two and three-dimensional graphic representation techniques using a wide variety of traditional and digital media, to reflect on and explain the architectural design process to a wide range of stakeholders.

PSO3: The knowledge and ability to apply a design decision-making process through appropriate technical documentation in a manner that is client-centered, sustainable, aesthetic, cost effective and socially responsible.

PSO4: Incorporate a wide range of technical skills and professional architectural knowledge during schematic design to demonstrate a comprehensive application of life safety, accessibility, and sustainability issues in making sound design decisions across varying scales and levels of complexity.

PSO5: Demonstrate the ability to synthesize a wide range of variables into an integrated design solution by employing appropriate building materials, building systems, and construction practices grounded in environmental stewardship and based on sound research and design decisions across varying scales of systems and levels of complexity.

PSO6: Understanding how to collaboratively lead teams of stakeholders in the process of conceiving, developing and implementing solutions to problems in the built and natural environments, utilizing knowledge of the diverse forms and the dimensions of professional practice along with associated ethical, legal, financial and social responsibilities.

PSO7: Apply math, physics, logic as reasoning skills to investigate problems related to force resolution in structural systems, thermal heat gain and loss in buildings, material quantity estimates, budget management, and life-cycle cost analysis.

PSO8: Demonstrate information literacy through applied research by raising clear and precise questions, using abstract ideas to clarify and express information, and considering diverse points of view, to reach well-reasoned conclusions and evaluate options against relevant design criteria, building standards, and program requirements.

Course Outcomes

AR-111	Design-I	CO1	To understand the application of visual grammar in the domain of Visual design.
		CO2	To create composition with various 2D and 3D media with various mediums.
		CO3	To critique basic design composition.
		CO4	To critique basic design composition.
AR-112	Graphics- I	CO1	To recognize and select drawing tools and techniques for drafting basic drawing.
		CO2	To identify a type of line, intensity, thickness, text to draw a shape. To implement a scale, dimension for a layout of sheet or drawing.
		CO3	To demonstrate a line, plane or solid into drawing using orthographic projections .
		CO4	To construct the drawings of complex compositions.
		CO5	To integrate the 2 dimensional drawings and 3 dimension form using development of surfaces.
		CO6	To formulate the 2 dimension into 3 dimension drawing using metric projection.
AR-113	Material Science	CO1	To introduce the students to building materials, their properties and application in building construction, along with the construction of some basic components of a building. To introduce the different components of a building and its functions.
AR-114	Humanities	CO1	Identifies the important aspects on verbal communication
		CO2	Recognizes common errors in verbal and written skills.
		CO3	Identifies differences in intents within communication.
		CO4	Paraphrase the written documents and verbally.
		CO5	Demonstrate role-play based on different situations.
		CO6	Formulates the verbal and non-verbal communications.
AR-115	Structure-I	CO1	Study of stresses and strains and their effect in various elements
		CO2	Inter-relationship between Young's modulus of elasticity. Bulk modulus of elasticity and modulus of rigidity
		CO3	Analytical method for determining stresses and strains in the oblique section.
		CO4	To learn why we provide a particular type of footing, beam, slab or retaining wall in a building.
		CO5	Basic study of resolution of forces as well as various study of various theorem related with equilibrium.
		CO6	To learn how to draw and make shear force and bending moment diagrams
AR-116	Work Shop-I	CO1	To sensitize the usage of various materials for production of art work.
		CO2	To apply different mediums and machine tools for production various types of art work.
		CO3	To create art forms with different mediums.
AR-121	Design-II	CO1	To understand the application of the architectural design process for small scale projects of human habitat.
		CO2	To transform the human behavioural needs into architectural program requirement.
		CO3	To analyse the information on context and the human-space relationship.
		CO4	To compose the architectural spaces in a design project.
		CO5	To communicate architectural drawings with the help of

			various mediums.
AR-122	Graphics- II	CO1	Recognize the need to combine the use of manual drawing tools and techniques for drafting and freehand drawing for architectural design communication..
		CO2	Apply the projected drawing method of exterior and interior perspective.
		CO3	Construct one and two point perspective drawings from floor plans and elevations Produce by Drawing/sketching 3-Dimensional Architectural drawings using and freehand techniques.
		CO4	Demonstrate an understanding of furniture, people and accessories in one and two point projected perspective drawing.
		CO5	Construct conceptual and presentation drawings as a design presentation tool for various purposes.
AR-123	Building Construction-I	CO1	To define basic building elements
		CO2	To recognize the various types of masonry and foundation made up of suitable materials To explain the types and necessity of stone masonry
		CO3	To apply composite materials for masonry works.
		CO4	To be aware of the properties and applications of various materials.
AR-124	History of Architecture-I	CO1	Identify different styles of historic architecture.
		CO2	Identify prominent / important historic buildings by their components / style of design
		CO3	Describe prominent / important historic buildings
		CO4	Analyze the contributing factors for the design development of different styles.
		CO5	Compare and Contrast various styles on the basis of the contributing factors responsible for their development.
		CO6	Design buildings in the historic architectural styles.
AR-125	Structure-II	CO1	Develop understanding of shear and bending stresses in Trusses.
		CO2	Calculate of Shear stress distribution in various sections.
		CO3	Calculate deflection in beams through analytical method
		CO4	Develop understanding various equation of column design
AR-211	Design-III	CO1	To apply the learning of the previous semesters.
		CO2	To develop sensitivity towards existing informal settings and elements of built space.
		CO3	To map gathered information of visited physical setting
		CO4	To critique the materials, construction techniques and structural systems used in the elements of built forms.
		CO5	To apply climate responsive techniques to simple single storied load bearing structures.
AR-212	Graphics- III	CO1	Develop understanding of computer aided drafting.
		CO2	Comprehends computer aided drafting and its parameter as tools and its application in architecture
		CO3	Demonstrate the concepts of CAD drafting methods and techniques in 2D and 3D through various architectural projects of progressive complexity
		CO4	Evaluates CAD techniques for quicker methods and presentation skills.
AR-213	Building Construction II	CO1	To develop understanding about complex foundations and the constructions techniques involved.
		CO2	To recognize openings used as different situations made up of timber from day to day life.
		CO3	To understand the importance of wooden carpentry joinery details used in openings.
		CO4	To comprehend the details/ arrangements of joinery in

			openings.
		CO5	To evaluate the best suitable Joinery in openings
		CO6	To learn properties of various construction materials like waterproofing materials, clay used as flooring materials and timber used in the building industry.
AR-214	History of Architecture II	CO1	Understanding of the factors that influence the evolution of early forms of the Hindu temple, Christian church and Islamic mosque in India and abroad, and the architectural characteristics and features of each type.
AR-215	Structure-III	CO1	To develop understanding about complex foundations and the constructions techniques involved.
		CO2	To recognize openings used as different situations made up of timber from day to day life.
		CO3	To understand the importance of wooden carpentry joinery details used in openings.
		CO4	To comprehend the details/ arrangements of joinery in openings.
		CO5	To evaluate the best suitable Joinery in openings.
		CO6	To learn properties of various construction materials like waterproofing materials, clay used as flooring materials and timber used in the building industry.
AR-216	Theory of Design	CO1	To comprehend a theoretical framework in architectural thinking since antiquities thus developing sensitivity to link design and theory.
		CO2	The students will understand theoretical premises in architectural design thinking.
		CO3	The students will learn Theoretical concepts and contextual variations of thoughts through historical eras.
		CO4	The students will be sensitized to various theoretical positions.
		CO5	The students will be equipped to apply theoretical standpoints in architectural design.
		CO6	The students will be able to synthesize theoretical approaches in design processes.
AR-221	Design-IV	CO1	To demonstrate the learning of the previous semesters
		CO2	To understand the given project in terms of the design process with requirements for the same
		CO3	To collect data from standards, case studies and site visits for the current project.
		CO4	To analyze data collected with relevance to the current project.
		CO5	To generate design concepts required for the given project.
AR-222	Building Construction-III	CO1	To recognize the various types of temporary supporting structures used in different locations in the building industry.
		CO2	To understand timber single and double roofs and timber floors.
		CO3	To be updated with the properties and applications of various special materials.
		CO4	To implement the details/ arrangements of temporary structures.
		CO5	To create drawings and designs based on the acquired knowledge base.
AR-223	Building Science-I (Climatology)	CO1	List the different elements of climate.
		CO2	Classify the factors of comfort.
		CO3	Infer the impact of climatic forces on built structures.
		CO4	Examine through mathematical formulae the thermal comforts levels of built form.
		CO5	Assess the effects of site, sun and wind in building

			response.
AR-224	History of Arch.- III	CO1	Ability to distinguish place- and period-specific architectural styles of religious architecture in India, Europe, West Asia and the Far East
AR-225	Structure-IV	CO1	To distinguish and classify various types of RCC material depending upon the strength and durability parameter.
		CO2	To design a beam for a given system of loading and structural geometry, for flexure and shear.
		CO3	To design a slab for given building floor for different end support conditions.
		CO4	To design a column for given axial load and moments.
		CO5	To design a dogleg staircase for given stair well space in residential or public building.
AR-226	Survey & Leveling	CO1	To provide knowledge of total Station & advanced surveying instruments.
		CO2	Develop skills in using Total Station & advanced surveying instruments and analyse data.
		CO3	Develop skills to set out Curves in the field using both Total Station and Theodolite.
		CO4	Develop skills to set out Curves in the field using both Total Station and Theodolite area
AR-311	Design-V	CO1	Value various advanced structural systems and latest building materials.
		CO2	Questions new technology, structural system and material.
		CO3	Formulate through drawings or models methods developed to meet various requirements.
		CO4	Apply new techniques and systems in their design.
		CO5	Build study models with precision (or Graphics) of chosen structure for designed space.
AR-312	Building Construction-IV	CO1	To understand the applications, construction details and varieties of various modes of vertical circulation in the building.
		CO2	To compare and analyze various materials used for cladding purposes for building components along with their construction details.
		CO3	To be aware of properties of various materials.
		CO4	To comprehend the various modes of vertical circulation through live examples.
AR-313	Building Services- I (Sanitation & Plumbing)	CO1	Discuss the active and passive components of plumbing.
		CO2	Value the importance of building services.
		CO3	Develop understanding of water supply system at city levels.
		CO4	Design water supply in residential and other small buildings.
		CO5	Design rain and waste water system in domestic building.
AR-314	Study Tour, Working Drawing & Measurement Drawings	CO1	Recalls the various drawing techniques, building construction techniques and structural systems. Interpretation and translation of drawings based on the structural and other practical considerations Re-create the drawings based on the various construction details and structural considerations.
		CO2	Demonstrate the preparation of execution drawings in the process of realization of a designed building. Integrate all the drawings prepare for the execution purpose.
AR-315	Modern Structural Systems	CO1	Identify the concept of various structural elements and system.
		CO2	Illustrate the use of different structural systems in building industry. Analyze the structural geometry based on strength and stability criteria.

		CO3	Outline the development of structural forms during the passage of architectural time line
		CO4	Design the effective use of structural systems for complex architectural need.
		CO5	Apply the fundamentals of temporary systems to design the shelters for disaster mitigation.
AR-316	Building Science-II (Energy Systems)	CO1	Demonstrate his/her capacity to understand the building as a whole with its integrated systems. Critically And Systematically Integrate.
		CO2	Demonstrate the capacity to critically and systematically integrate his/her knowledge about energy-efficient buildings as well as analyze and assess complex systems and built environment
		CO3	Demonstrate the capacity to evaluate and analyze energy consumption in buildings and suggest measures to modify it
		CO4	To be able to illustrate methods to reduce energy consumption of buildings.
		CO5	To be able to understand and apply current energy rating systems of built environment.
AR-321	Design-VI	CO1	Value various indigenous and latest building materials
		CO2	Demonstrates architectural and structural vocabulary through verbal and written communication
		CO3	Questions conventional technology, structural system and materials
		CO4	Develop sensitivity towards building bye-laws.
		CO5	Build with precision block models, study models, site models.
AR-322	Building Construction- V	CO1	To comprehend various types of door and windows used in different situations from day to day life.
		CO2	To understand the variety of available metal sections for varied uses.
		CO3	To comprehend the details/ arrangements of reinforcement.
		CO4	To gain knowledge of properties of various special materials.
		CO5	To evaluate the best suitable material and type of Door, Window and Partitions.
AR-323	Building Services-II (Electrical & Mechanical)	CO1	To understand the variety of available metal sections for varied uses.
		CO2	To comprehend the details/ arrangements of reinforcement.
		CO3	To gain knowledge of properties of various special materials.
		CO4	To evaluate the best suitable material and type of Door, Window and Partitions.
AR-324	Specifications, Estimating & Costing	CO1	Knows and Recalls the process of Construction stage wise and the type of Construction and materials used.
		CO2	Comprehend and understand the various processes of Estimating, Valuation, and tendering.
		CO3	Execute and Implement the appropriate methods for preparing the estimates and valuation reports.
		CO4	Demonstrate the acquired knowledge to complete a building Estimate/ Valuation report.
		CO5	Compares, evaluates, and interprets the building typologies for preparing an estimate or doing the valuation, Justify with the help of documents and analysis.
AR-325	Site Planning & Landscape	CO1	Knows and Recalls the process of Construction stage wise and the type of Construction and materials used.
		CO2	Comprehend and understand the various processes of Estimating, Valuation, and tendering.

		CO3	Execute and Implement the appropriate methods for preparing the estimates and valuation reports.
		CO4	Demonstrate the acquired knowledge to complete a building Estimate/ Valuation report.
		CO5	Compares, evaluates, interprets the building typologies for preparing an estimate or doing the valuation, Justify with the help of documents and analysis.
AR-326	Project Management & Building Economics	CO1	Enumerate the attributes of a project, phases in project cycle, stakeholders involved and their management.
		CO2	Describe the time, cost, quality, safety and contract management processes involved in a construction project.
		CO3	Prepare project schedule through identification of critical tasks and path in a project.
		CO4	Generalize the entrepreneurship issues commonly faced by architectural firms in Indian Construction Industry.
		CO5	Discuss the tools and skill-sets required for managing office set-ups.
AR-411	Design-VII	CO1	Value various indigenous and latest building materials.
		CO2	Demonstrates architectural and structural vocabulary through verbal and written communication.
		CO3	Develop sensitivity towards building bye-laws.
		CO4	Apply services learnt in previous semester to design project at building and site level.
		CO5	Build with precision block models, study models, site models.
AR-412	Adv. Building Construction	CO1	To comprehend various types of roofing structures used in different purposes from day to day life.
		CO2	To explain the alternatives of Long span structures in Steel.
		CO3	To understand the variety of available MS sections (Hot and Cold Rolled) for varied uses.
		CO4	To comprehend the details/ arrangements of combinations for various uses. To make students aware of the process of Pre-fabrication in advanced building construction processes
		CO5	To compare the various types of steel roofing with different material used to analyze the construction details.
AR-413	Adv. Building Services-III	CO1	Analyse critically the air conditioning systems used in their case study buildings.
		CO2	Apply the knowledge of air conditioning systems in their current design exercise.
		CO3	Explain different phenomenon and principles related to sound propagation and their implications on building design.
		CO4	Summarize the common acoustical defects in an auditorium and the ways to avoid / correct them
		CO5	Describe the different types of noise, their transmission and the measures to isolate / control them.
AR-414	Ecology & Environment	CO1	To make the students aware about the scientific knowledge and current debates on the environment at three nested scales, including their interlink ages – Global, Regional and Local..
		CO2	To enable the students to understand cause-and-effect relationships between various human, natural and climatic factors that impinges upon ecological systems and their linkages.
		CO3	Through its focus on real-life examples and through the medium of studio exercises, the student learns ways in which ecological and environmental concerns can be integrated (synthesis) into Architectural programs.

		CO4	To be able to be sensitive with global & national environmental issues, the scale of impacts, important conventions, laws and policies in the field of biodiversity, and environmental protection.
		CO5	To develop and integrate higher level studios with that have complex briefs, including environmental and ecological concerns.
AR-415	Town Planning	CO1	Define types of settlements based on different criteria
		CO2	Identify the elements of a settlement.
		CO3	Describe the principle of a settlement pattern. Classify constituents of town/city
		CO4	Distinguish between different settlements, concepts of planning and techniques of survey
		CO5	Review the condition of development/status of urbanization.
AR-421	Practical training	CO1	To understand and apply the professional aspects of an architecture office/company and the multiple issues in conception, preparation and execution of project on a site.
		CO2	To be aware of or sensitive to the existence of certain ideas, material, or phenomena and being willing to tolerate them.
		CO3	To be able to formulate and theorize the principles into practices.
		CO4	To be able to set practises to act consistently in accordance with the values he or she has internalized.
AR-511	Practical training	CO1	To make the students aware about the scientific knowledge and current debates on the environment at three nested scales, including their interlink ages – Global, Regional and Local.
		CO2	To enable the students to understand cause-and-effect relationships between various human, natural and climatic factors that impinges upon ecological systems and their linkages.
		CO3	Through its focus on real-life examples and through the medium of studio exercises, the student learns ways in which ecological and environmental concerns can be integrated (synthesis) into Architectural programs.
		CO4	To be able to be sensitive with global & national environmental issues, the scale of impacts, important conventions, laws and policies in the field of biodiversity, and environmental protection.
		CO5	To develop and integrate higher level studios with that have complex briefs, including environmental and ecological concerns.
AR-521	Thesis Project	CO1	Designs a Thesis project responsive to the contextual and program requirements.
		CO2	Combines the systematic/methodological learning from various stages of study and analysis in design process towards culmination of an informed design. Communicates the ideas clearly using writing, verbal and visual presentation.
		CO3	Demonstrates self-reliance when working independently .Integrates ideas with design requirements
		CO4	Compares data and information gathered from Pre-design research.
		CO5	Evaluates data and information gathered from Pre-design research and summarizes the information to use for design
AR-522	Urban Design	CO1	To Interpret relationship between the building and city.
		CO2	To map the dimensions of urban space.
		CO3	To synthesize complex urban issues.

		CO4	To resolve the interface between the building and urban space.
		CO5	To respond to urban design of built form context.
AR-523	Professional Practice	CO1	Develop the practice and office management.
		CO2	Identify and define the legal provisions for architectural practice.
		CO3	Appraise the morals and ethics in architectural profession.
		CO4	Acknowledge the social responsibilities and duties of an architect.
		CO5	Comply with social norms and responsibilities. Defend and practice professional ethics.

M. Arch

Program Outcomes

PO1. Architectural Knowledge:- Acquire a wide range of Professional architectural knowledge which will help them to practice as an architect. Students will be equipped with gaining knowledge of architecture as well as allied fields like environmental science, landscaping, sustainability, urban design, Photography, architectural writing which can be further enhanced by doing specialisation.

PO2. Problem Solving:- Through education, we emphasize the power of discovery and the foundation of critical and analytic thinking. We foster creativity, challenge the boundaries of knowledge and cultivate independence of mind through unique interdisciplinary partnerships. Ours is a proud culture of innovation, collaboration and discovery that has transformational impact on the society.

PO3. Design development: Systematic exploration of architectural design through sequential development in the complexity of design issues. Systematically integration of all other allied subjects at different levels depending upon the objectives to be achieved. Identify, formulate, Precedent studies in form of case studies, literature study for analysis and inferences to reach conceptualization for a particular design project. Considerations of climatic studies, sustainability, environmental issues, structural detailing, byelaws and norms etc to develop a design solution.

PO4. Conduct Investigations:- This promotes academic excellence and nurtures innovation and scholarly development in our students. We are committed to overall academic excellence through exploration of diverse contexts and innovations through collaborative research. Use research based knowledge and research methods including experiments, analysis and interpretation of data and synthesis of information to arrive at a conclusion. Respect for cultural and social diversities is linked to academic excellence. We hold ourselves to the highest standards of ethics, as a beacon for our community and the world.

PO5. Use of Modern tool: Application of appropriate techniques, resources and modern tools including prediction and modelling to derive at solutions, Use of various presentation techniques to explain the solutions.

PO6.Environment and Sustainability: Making students sensitive towards varied aspects of Built Environment. Understand impact of the professional architectural design solutions in societal and environmental contexts and demonstrate the knowledge of, and need for sustainable development.

PO7. Ethics: Apply ethical principles and commit to professional ethics and responsibility and norms of the architectural professional practice.

PO8. Individual and teamwork: function effectively as an individual and as member or leader in diverse teams and in multidisciplinary settings.

PO9. Communication: Communicate effectively on architecture issue with the architecture fraternity, community and society at large, able to write effective reports, design documentation, make effective presentations, give and receive instructions.

PO10. Project management and Finance: demonstrate knowledge and understanding of architecture design management principles and apply these in individual work, as a member and leader in team, to manage projects and in multidisciplinary environment.

PO11. Lifelong learning: Recognize the need for, and have the preparation for an independent and lifelong learning in the broadest context of technological change.

Program Specific Outcomes (PSO)

PSO1 Teaching – Learning:- To assimilate various methodologies of teaching learning and modes of transmitting the same.

PSO2 Development of Higher Order Thinking Skills:-The focus of the course is to develop higher order thinking skills in designers and design teachers.

Course outcomes

MAR - 101	Urban Conservation	CO1	The students would gain an understanding of the need and benefits of urban conservation.
		CO2	The students would be sensitised as well as informed to carry forth this understanding in the realm of practice/ research.
MAR - 102	Urban Design - Theory and Practice	CO1	Awareness of urbanism as a phenomenon.
		CO2	Knowledge about different ways of addressing

			urban issues.
MAR - 103	Contemporary Processes in Architectural Design	CO1	Understanding of the effect of contemporary theories of media on contemporary architectural design.
		CO2	Understanding of various contemporary design processes and their relation to computation.
MAR- 104	Anthropology and Architecture	CO1	A comprehensive understanding of architecture and urbanism as expressions of particular societies in time and place.
MAR - 105	Urban Morphology	CO1	Study of emerging urban processes would help understand the relationship between architecture and the city and thereby contextualize architectural design process.
MAR - 106	Advanced Architectural Design Studio I	CO1	An ability to design buildings that respond to emerging urban conditions
MAR-201	Sustainable Design-Principles And Practice	CO1	An understanding on sustainability as applicable to architecture and planning.
		CO2	Knowledge on renewable energy and energy conservation through material usage.
		CO3	Ability to critically analyse buildings with respect to sustainability.
MAR -202	Research Methodologies in Architecture	CO1	The student will develop the skill to identify, decipher and interpret issues relating to architecture based on research enquiry methods.
		CO2	The student will gain knowledge of different methods of conducting research and research writing.
MAR -203	Performance Evaluation of Buildings	CO1	The students will gain knowledge on environmental assessment methods, audit and simulation techniques.
		CO2	Will add value to architectural design processes and equip students with energy modelling skills.
MAR – 204 A	Services in High Rise Buildings	CO1	Students can apply some or all of these services in one of their design projects.
MAR – 204 B	Vernacular Architecture	CO1	Understanding of vernacular living aspect of architecture.
		CO2	Getting update theory of topicality in vernacular aspe.
MAR – 205	Building Information Modelling	CO1	This is a project-based course where students gain knowledge on the implementation of BIM concepts throughout the lifecycle of a building, from planning and design, to construction and operations.
		CO2	The students will learn about how to use BIM for building energy performance simulation, construction administration
MAR-206	Advanced Architectural Design Studio II	CO1	An ability to balance human needs with environmental concerns in architectural design.
MAR – 301	Contemporary Architectural Theory and Practice	CO1	A critical understanding of architectural ideas and practice prevalent in the contemporary world that would inform architectural ideals/positions and design responses.
MAR -302	Arbitration and Advanced Professional Practice	CO1	The student will be familiar with the various legal systems that are in force and the methods of handling disputes.
		CO2	The student will understand the role and responsibility and the ethical standards that

			given an architectural practice.
MAR- 303	Sustainable and Green Buildings	CO1	He students gain an understanding of the various aspects of sustainable and green building design. The students are able to comprehend the Green Building rating system.
MAR-303	Traffic & Transport Design	CO1	Getting knowledge of importance transit systems in urban planning.
		CO2	To know about transport management and transport services thoroughly.
MAR-304	Emerging Practices in Housing	CO1	The students will understand the latest development, issues and design strategies governing the Housing in National and international level
MAR – 305	Project Phase I – Dissertation	CO1	A Dissertation book which is based on accepted norms of technical writing.
		CO2	An understanding leading to formation of thesis ideas.
MAR – 306	Advanced Architectural Design Studio III	CO1	Students would be aware of contemporary processes and tools of design.
		CO2	Students would use these processes and tools in the design projects to identify and address specific aspects of the project, as well as integrate complexity of connections and issues.
MAR – 401 A	GIS Modelling in Urban Planning	CO1	The student will increase the knowledge on GIS and the various characteristics of Data.
		CO2	The student will accept the potential of GIS and develop integrated practice of using the GIS application with architecture.
MAR – 401 B	Explorations in Architectural Form	CO1	The student will be able to explore architectural form through contemporary processes
MAR - 403	Project Phase II - Thesis	CO1	Students would be able to integrate various contemporary/ advanced issues and techniques into the architectural design process.
		CO2	Students would be able to identify and go in depth into specific and appropriate aspects relating to the discipline of architecture and reflect this in the realm of design.
