

RKDF University

Program Outcomes, Program Specific Outcomes and Course Outcomes

Faculty of Paramedical

BACHELOR OF PHYSIOTHERAPY (BPT)

Programme Outcome (POs)

- PO1:** Capability of demonstrating comprehensive knowledge of physiotherapy.
- PO2:** Ability to analyze the results and apply them in various problems.
- PO3:** Ability to employ critical thinking in understanding the concepts in every area of BPT programme.
- PO4:** Capability to solve problems by using research-based knowledge and research methods and can set short term and long term goals for rehabilitation.
- PO5:** Possess knowledge of the values and beliefs of multiple cultures and a global perspective and capability to effectively engage in a multicultural society and interact respectfully with diverse groups Create, select, and apply appropriate techniques and resources.
- PO6:** Ability to identify unethical behavior and adopting objective, unbiased and truthful actions in all aspects of their programme.
- PO7:** Ability to work independently and with various multidisciplinary in hospitals and community centers.
- PO8:** Ability to communication effectively and flexibly in a manner that is appropriate for the patients and other healthcare professionals.
- PO9:** Develop a sense of research to predict cause-and-effect relationships.

PROGRAM SPECIFIC OUTCOMES:-

- PSO1** After successful completion the students shall be proficient in making diagnosis and skills of physiotherapy procedure and techniques.
- PSO2** Additionally they expertise in physical medicine and rehabilitation
- PSO3** Responsibility and leadership qualities among each and every student along with advanced professional skills.
- PSO4** As a health professional the students shall have an added responsibility towards the community health issues.

Course Outcomes:

Human Anatomy –BPT-101

- CO 1: A student will be able to understand Identify all gross anatomical structures, particular emphasis will be placed on description of bones, joints, muscles, brain, cardio-pulmonary and nervous systems as these relate to the application of Physiotherapy.
- CO 2: Demonstrate knowledge in human anatomy as in necessary for the study and practice of physiotherapy.
- CO3: A student should apply the gross anatomy knowledge while treating the patients.

Human Physiology-BPT-102

- CO1: Understand the basis of normal human physiology with special emphasis on the functioning of the cardiovascular, musculo-skeletal and nervous systems.
- CO2: Demonstrate an understanding of elementary human physiology and Bio-Chemistry.
- CO3: Understand how abnormal Physiology affects human function and dysfunction of the human body.

Fundamentals of Physics, Biomechanics & Exercise Therapy-BPT-103

- CO1. After completing this course the ability of the student to understand the basic principles of Physics, how physics is applied in human body, Biomechanics, exercise therapy, basic principles and application of soft tissue manipulation and their uses & functions.
- CO2. Provide high quality, ethical, effective, and cost efficient practices by students and gain expertise in the exercise prescription to patients.

- CO3. Practice various assessment strategies like Goniometry, Tone assessment, Muscle power assessment etc for detailed learning.
- CO4. Understand principles and procedures, indications, contraindications and precautions, appropriate methods of application of each of the assessment strategy and treatment techniques hands on and on models.
- CO5. Communicate with the patient in a professional and ethical manner.

Fundamentals of Medical Electronics & Principles Of Bioelectrical Modalities-BPT-104

- CO1. Know the principles, technique and effects of electrotherapy as a therapeutic modality in the restoration of physical function in condition like nerve injuries.
- CO2. List the indications and contra-indications of various types of electrotherapy, demonstrate different techniques and describe their effects.
- CO3. Aware of the construction, Biophysical principles and effects, dangers, safety measures, judicial use, appropriate methods of application, contraindications of the various low frequency equipment.
- CO4. Practice evidence based physiotherapy.

Psychology & Sociology-BPT-105

- CO1. Recognize and help with the psychological factors involved in disability, pain, disfigurement, unconscious patients, chronic illness, death, bereavement and medical- surgical patients/conditions.
- CO2. Understand the elementary principles of behavior for applying in the therapeutic environment.
- CO3. Perform psychosocial assessment of patients in various developmental stages.
- CO4. Understand Ego defense mechanisms and learn counseling techniques to help those in need demonstrate an understanding of the role of socio-cultural factors as determinants of health and behavior in health and sickness.
- CO5. Relate to therapeutic situations in the practice of physiotherapy.
- CO6. Understand the role of family and community in the development of behaviors.
- CO7. Develop a holistic outlook toward the structure of society and community resources.

Pathology & Microbiology-BPT-201

- CO1. Learn the pathological changes in various conditions, diseases and disorders,

which are commonly treated by physiotherapy.

- CO2 Demonstrate an understanding of the pathology and microbiology of common diseases that therapists would encounter in their daily practice.
- CO3 Understand how to protect themselves and their patients from infections during their interactions.

Biochemistry & Pharmacology-BPT-202

- CO1 Demonstrate comprehensive understanding of biochemistry.
- CO2. Acquire the knowledge in biochemistry that is required to be practiced in community and at all levels of health care system.
- CO3. Understand relevant investigations which will help to know about the important medical conditions.
- CO4. Demonstrate empathy and have a human approach towards patients & respect their sensibilities.
- CO5. Possess a relevant knowledge in basic principles of pharmacology and its recent advances.
- CO6. Understand the basic pharmacology of common drugs used their importance in the overall treatment including Physiotherapy.
- CO7. Understand the general principles of drug action and the handling of drugs by the body.
- CO8. Understand the contribution of both drug and physiotherapy factors in the outcome of treatment.

Medicine Including Pediatrics & Geriatrics-BPT-203

- CO1. Once completed the course in Pediatrics the students understand patients' physiology and its special needs in relation to physical therapy.
- CO2. This course is that students at the end of course shall have a broad understanding about common medical diseases, which they would be handling as a physiotherapist.
- CO3. They should have a brief idea about Etiology, pathology, Type and Degree of Disability the patient will have as a result of the disease, so that he/she as a physiotherapist with physician should help the patient to achieve cure and/or ameliorate his/her illness and sufferings.

General Surgery, Obstetrics & Gynecology-BPT-204

- CO1. Demonstrate comprehensive understanding of general surgery and female reproductive system.
- CO2. Acquire the knowledge in surgeries that are required to be practiced in community and at all levels of health care system.
- CO3. Understand relevant investigations which will help to know about the important medical conditions.

Exercise Therapy Including Yoga-BPT-205

- CO1. To understand the principles of exercise therapy and its application as a treatment modality.
- CO2. The objectives of this course is that after 200 hours of lectures, demonstrations, practical and clinical, the students shall be able to list the indications and contraindications of various types of exercise and demonstrate the different techniques and describe their effects.
- CO3. In addition, the students shall be able to fulfill with 75% accuracy (as measured by written, oral and practical internal evaluation) the following objective of the course.

Electrotherapy-BPT-206

- CO1. Know the principles, technique and effects of electrotherapy as a therapeutic modality in the restoration of physical function in condition like nerve injuries.
- CO2. List the indications and contra-indications of various types of electrotherapy, demonstrate different techniques and describe their effects.
- CO3. Aware of the construction, Biophysical principles and effects, dangers, safety measures, judicial use, appropriate methods of application, contraindications of the various low frequency equipments.
- CO4. Practice evidence based physiotherapy.

Neurology Including Psychiatry& Neurosurgery-BPT-301

- CO1. Demonstrate comprehensive understanding of nervous system.
- CO2. Acquire the knowledge in nervous system that is required to be practiced in community and at all levels of health care system.
- CO3. Understand relevant investigations which will help to know about the important medical conditions.

Orthopaedics-BPT-302

- CO1. Understand relevant investigations technique which will help to diagnosed various orthopedic conditions.
- CO2. Able to integrate theoretical knowledge with clinical assessment.
- CO3. Demonstrate clinical decision making ability and treat different musculoskeletal conditions.
- CO4. Demonstrate comprehensive understanding of skeletal system including bones and joints.
- CO5. Acquire the knowledge in skeletal system that is required to be practiced in community and at all levels of health care system.
- CO6. Understand relevant investigations which will help to know about the important medical conditions.

Applied Bio-Mechanics & Kinesiology-BPT-303

- CO1. To understand the musculoskeletal surgical anatomy normal and pathological deviations.
- CO2 After 90 hours of lectures, demonstrations, and practicals, the student shall be able to demonstrate an understanding of the principles of biomechanics, kinesiology and their applications in health, disease and bioengineering.
- CO3 In addition the student shall be able to fulfill with 75% accuracy (as measured in written and oral evaluation) the following objectives of the course

Physiotherapeutic in Neurology & Neurosurgery-BPT-304

- CO1. Understand relevant investigations technique which will help to diagnosed various Neurological condition conditions.
- CO2. Able to integrate theoretical knowledge with clinical assessment.
- CO3. Developed clinical decision making ability and treat different neurological conditions.

Physiotherapeutic in Orthopedic Conditions-BPT-305

- CO1. Understand relevant investigations technique which will help to diagnosed various orthopedic conditions.

- CO2. Able to integrate theoretical knowledge with clinical assessment.
- CO3. Demonstrate clinical decision making ability and treat different musculoskeletal conditions.

Physical Evaluation, Diagnosis & Prescription-BPT-306

- CO1. This course serves to integrate the knowledge gained by the students in both basic and Clinical Medical science subjects and physiotherapy subjects, thus enabling them to apply these in evaluation of functions and measurements in general and in clinical situations of dysfunctions of systems in order to reach a state of diagnosing the physical problems presented by the patients.
- CO2. The student shall also learn principles, techniques and effects of exercise as a therapeutic modality in the restoration of physical function.

Community Pt, Rehabilitation & Disability Prevention-BPT-401

- CO1. This course provides knowledge about health care delivery programmes in Rural and urban areas and role of Physiotherapy in both Rural & Urban set ups with special emphasis to various community awareness programmes and preventive aspects of health disorders causing disability.
- CO2. Enables the student to understand the effects of the environment and the community dynamics on the health of the individual with special emphasis on disability limitation specific protection and rehabilitation.

Research Methodology & Biostatistics-BPT-402

- CO1. Demonstrate various methodologies in research.
- CO2. Acquire the knowledge in research and biostatistics that are required to be practiced in community and at all levels of research methods.
- CO3. Understand relevant biostatistics methods which will help to know about the research outcomes.

Cardiothoracic Diseases and Surgeries-BPT-403

- CO1. Understand relevant investigations technique which will help to diagnosed various cardiothoracic conditions.
- CO2. Able to integrate theoretical knowledge with clinical assessment.

- CO3. Demonstrate clinical decision making ability and treat different respiratory and cardiac condition.

Physiotherapeutic In General & Cardiothoracic Conditions-BPT-404

- CO1. Understand relevant investigations technique which will help to diagnosed various cardiothoracic conditions.
- CO2. Able to integrate theoretical knowledge with clinical assessment.
- CO3. Demonstrate clinical decision making ability and treat different respiratory and cardiac condition.

Sports Physiotherapy-BPT-405

- CO1. This course serves to integrate the knowledge gained by the students in both basic and Clinical Medical science subjects and physiotherapy subjects, thus enabling them to apply these in evaluation of functions and measurements in general and in clinical situations of dysfunctions of systems in order to reach a state of diagnosing the physical problems presented by the patients.
- CO2. The student shall also learn principles, techniques and effects of exercise as a therapeutic modality in the restoration of physical function.

PT Ethics, management &Administration-BPT-406

- CO1. This course serves to integrate the knowledge gained by the students in both basic and Clinical Medical science subjects and physiotherapy subjects, thus enabling them to apply these in evaluation of functions and measurements in general and in clinical situations of dysfunctions of systems in order to reach a state of diagnosing the physical problems presented by the patients.
- CO2. The student shall also learn principles, techniques and effects of exercise as a therapeutic modality in the restoration of physical function.

Project Work-BPT-407

- CO1. This course serves to integrate the knowledge gained by the students in both basic and Clinical Medical science subjects and physiotherapy subjects, thus enabling them to write projects related to their research.
- CO2. The student shall also learn principles, techniques of writing projects for different funding agencies.
